PRODUCT DEMO · WORKING SOFTWARE, NOT SLIDES

DEMO OVERVIEW.

A barcode driven inventory system for the corporate office, its two cigar shops, and Davidoff Hard Rock. This document tours the live demo: what is on the dashboard, and what it changes about the operation.

the master list that updates itself

PREPARED FOR

DAVIDOFF HARD ROCK
HOLLYWOOD, FL

AUGUST 2026

THE DASHBOARD, AT A GLANCE.

One screen answers the question the spreadsheet cannot: how is my inventory right now? Every figure is computed live from the movement ledger. Nothing on this screen is typed by anyone.

1

Four live measures

Total SKUs, units on hand across the four locations, inventory value, and movements recorded today. A cost change updates the value instantly. Shown here at current unit cost; the valuation method is configurable to match your accounting.

2

Each location, each entity

Corporate Office, both cigar shops and Davidoff Hard Rock, each with its own units, value and top products by value. Entity tags keep the two companies visibly separate.

3

Low stock, before it hurts

Products running low surface automatically. One click jumps to the catalog with the product already searched, from alert to action.

4

Who did what, when

The latest movements in plain language: receipts, transfers, cost changes and count adjustments, each with its author and time. Accountability without asking for reports.

HOW IT HELPS THE OPERATION.

The dashboard is the visible part. What powers it is a movement ledger written by the daily work itself: every scan at receiving, every transfer, every count.

TODAY, BY HAND	WITH THE SYSTEM
Nobody can say what the inventory is worth without building a spreadsheet first.	Inventory value is on screen, live, per location and in total, at current unit cost.
Finding out who moved product, and when, means asking around.	Every movement carries its author and time. The activity feed answers before anyone has to ask.
A product runs out, and the first sign is an empty shelf.	Low stock surfaces itself while there is still time to act.
Two legal entities share one master list, and one file shows everything to everyone.	Access follows role and location. Each entity sees its own stock and its own costs; the demo shows costs locking when a shop clerk signs in.
A price change means editing the file and hoping every copy catches up.	One cost update, kept with history. Date, author, old and new value, and the per-unit cost derived from the box automatically.
No signal in the humidor or warehouse means no records until later, from memory.	Scanning continues offline. Work queues on the device and syncs the moment the connection returns.

The team does not feed the dashboard. The team receives, moves and counts product, *and the dashboard is simply what that work looks like.*

BEYOND THE DASHBOARD.

The dashboard summarizes; these screens do the work, all functional in the demo.

RECEIVE · SCAN

Scan with a USB scanner, a phone camera where the browser supports it, or the on-screen simulator. Known codes log instantly; unknown ones open a short form; no barcode means an internal SKU plus a printable label.

TRANSFER

Corporate to shop in one movement. Stock leaves one location and arrives at the other, and both sides see the same ledger entry.

CATALOG

The master list: search, category and supplier filters, column sorting, cost history per product, stock status chips, and bulk CSV export of selected rows.

COUNTS

Count sheets per location with expected quantities. Variances are highlighted and applied as auditable adjustments.

LEDGER

The full movement history, filterable by location and type. The record the accounting team verifies against.

EXPORTS

Catalog, ledger, stock by location and valuation, one click each, as CSV shaped for the accounting workflow.

LABELS

Printable label sheets with scannable barcodes for products that arrive without one. Print once, scan forever.

ROLES & CONNECTION

Switch users to see access control live, and toggle the connection off to watch offline scanning queue and sync back.

TWO THEMES, ONE BRAND.

LIGHT · DAYTIME COUNTER

DARK · LOUNGE EVENINGS

SEE IT LIVE

The demo runs in any browser, nothing to install. Data is illustrative and resets on demand. A standard USB barcode scanner works out of the box.
